INTRINSIC SUBROUTINES

INPUT (port,var)	Port Input
OUTPUT (port, exp)	Port Output

ISIS-II 8080/8085 COMPILER INVOCATION

The 8080/8085 FORTRAN compiler is invoked by the ISIS-II command:

-[device] FORT80 *sourcefile* [compiler controls]

ISIS-II COMPILER CONTROLS

The following list shows the controls available, the basic function they control, and whether they are primary or general (P/G). Default controls are italicized.

Controls	P/G	FUNCTION AREA
OBJECT/NOBJECT	P	Object File
DEBUG/NODEBUG	P	Object File
OPTIMIZE (0)/OPTIMIZE (1)	P	Object File
PRINT/NOPRINT	P	Compiler Listing
LIST/NOLIST	G	Compiler Listing
SYMBOLS/NOSYMBOLS	P	Compiler Listing
CODE/NOCODE	G	Compiler Listing
XREF/NOXREF	P	Cross-Reference Listing
PAGING /NOPAGING	P	Listing Format
PAGELENGTH(60)	P	Listing Format
PAGEWIDTH(120)	P	Listing Format
DATE	P	Listing Format
TITLE	P	Listing Format
EJECT	G	Listing Format
REENTRANT	P	Procedure Reentrancy
DO77/DO66	P	DO Loop Interpretation
STORAGE(INTEGER*2)	P	Storage Unit Length
STORAGE(LOGICAL*1)	P	Storage Unit Length
FREEFORM/NOFREEFORM	G	Source Line Format
INCLUDE	G	Source File Inclusion
WORKFILES(:F1;,:F1:)	P	Workfile Devices
SAVE	G	Stack Controls
RESTORE	G	Fetch Controls

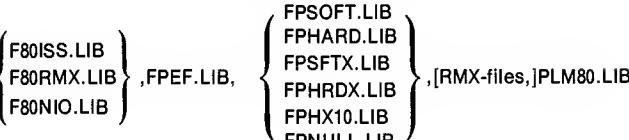

LINKING RELOCATABLE OBJECT MODULES

The syntax of the ISIS-II LINK command is:

LINK *inputlist* TO *linkfile* [link controls]

inputlist must include the following:

[RMX8xx.LIB (START),] object-files, F80RUN.LIB, &

where braces indicate a choice and the items in brackets are required only under RMX/80. LINK controls are MAP, NAME, and PRINT.

To link non-RMX programs for which F80RUN.LIB, F80ISS.LIB, FPEF.LIB, FPSOFT.LIB, and PLM80.LIB are selected and LINK controls are not needed, use:

SUBMIT FLINK (*objectfile*, *linkfile* [,lib-drive])

where if *lib-drive* is omitted, the libraries are assumed to be on :F0:.

LOCATING MODULES

The syntax of the ISIS-II LOCATE command is:

LOCATE *inputfile* [TO *outputfile*] [locate controls]

LOCATE controls are:

ORDER (segids)	//(addr)	NAME (module)
CODE (addr)	PRINT fname	STACKSIZE (m)
DATA (addr)	NOPRINT	START (addr)
STACK (addr)	MAP	PURGE
MEMORY (addr)	LINES	RESTART0
/common name/ (addr)	PUBLICS	SYMBOLS

LOADING AND EXECUTING A PROGRAM ON INTELLEC® MICROCOMPUTER DEVELOPMENT SYSTEMS

The command syntax to load and execute a FORTRAN program is as follows:

[device] *object-file* [UNIT n = device] [,UNIT n = device]...

CODING SEQUENCE

This diagram shows the order of statements and comment lines within a program unit. Statements on the same level can be interspersed. For example, FORMAT statements can be interspersed with executable statements.

PROGRAM, FUNCTION, SUBROUTINE, or BLOCK DATA Statement			
Comment Lines	FORMAT Statements	IMPLICIT Statement	
		Other Specification Statements	
		DATA Statement	
		Executable Statements	
		END Statement	

FORTRAN STATEMENTS

NONEXECUTABLE STATEMENTS

Main Program Definition:

PROGRAM name Name main program.

Procedure Definition:

[typ] FUNCTION func ([d,d,...]) Define FUNCTION Subprogram.

SUBROUTINE sub ([d,d,...]) Define SUBROUTINE Subprogram.

Specification Statements:

IMPLICIT typ (a,a,...) [typ (a,a,...)]... Define implicit typing.

INTEGER [*len[,]] name[,name]... Define integer variables.

REAL v [,v]... Define real variables.

LOGICAL [*len[,]] name[,name]... Define logical variables.

CHARACTER [*len[,]] name[,name]... Define character variables.

DIMENSION a (d,d,...) [a,d,...]... Define array(s).

COMMON [/ [cb] /]nlist [...] / [cb] / nlist... Define common block(s).

EQUIVALENCE (nlist) [, (nlist)]... Specify shared memory.

EXTERNAL proc [,proc]... Allow procedure to be actual argument.

INTRINSIC func [,func]... Allow intrinsic to be actual argument.

SAVE /cb/ [, / cb /]... Save common data.

Data Initialization:

BLOCK DATA [sub]

DATA nlist / clist / [...]nlist / clist /]...

Input/Output:

label FORMAT ([flist])

'flist' Items

Repeatable

Iw	Integer
Fw.d	Real No.
Ew.d	Real No.
Ew.dEe	Real + Exponent
Lw	Logical
A	Alphanumeric
Aw	Alphanumeric
Bw	Binary I/O
Zw	Hexadecimal I/O

Nonrepeatable

'string'	nHstring
nX	/
kP	BN
BZ	\$

Program Termination:

PAUSE [n]

STOP [n]

END

Input/Output (Data Transfer):

READ (cilist) [inlist]

READ f [,inlist]

WRITE (cilist) [outlist]

PRINT f [,outlist]

'cilist' Items

[UNIT =] u	Unit Specifier
[FMT =] f	Format Specifier
REC = recno	Record No. Spec.

IOSTAT = ios

ERR = stmt

END = stmt

EOF Specifier

Input/Output (file Control):

OPEN (olist)

CLOSE (clist)

BACKSPACE u

BACKSPACE (alist)

REWIND u

REWIND (alist)

ENDFILE u

ENDFILE (alist)

'olist' Items

[UNIT =] u	Unit Specifier
IOSTAT = ios	I/O Status Spec.
ERR = stmt	Error Specifier
FILE = fnam	File Name
STATUS=stat	File Status

ACCESS = acc

FORM = fmt

RECL=recln

BLANK = bInk

CARRIAGE=car

Carriage Control

'clist' Items

[UNIT =] u	Unit Specifier
IOSTAT = ios	I/O Status Spec.

ERR = stmt

STATUS=stat

Error Specifier

'alist' Items

[UNIT =] u	Unit Specifier
ERR = stmt	Error Specifier

IOSTAT = ios

I/O Status Specifier

INTRINSIC FUNCTIONS

FORM	FUNCTION	TYPE OF	
		ARGUMENTS	FUNCTION
INT (a)	Convert a to type integer	Real	Integer
IFIX (a)	Convert a to type integer	Real	Integer
REAL (a)	Convert a to type real	Integer	Real
FLOAT (a)	Convert a to type real	Integer	Real
ICHAR (a)	Convert a to type integer	Character	Integer
AINT (a)	Truncate a to integer value	Real	Real
ANINT (a)	Round a to nearest whole number	Real	Real
NINT (a)	Round a to nearest integer	Real	Integer
IABS (a)	Return absolute value of a	Integer	Integer
ABS (a)	Return absolute value of a	Real	Real
MOD (a1,a2)	Return remainder from a1/a2	Integer	Integer
AMOD (a1,a2)	Return remainder from a1/a2	Real	Real
ISIGN (a1,a2)	Transfer sign of a2 to a1	Integer	Integer
SIGN (a1,a2)	Transfer sign of a2 to a1	Real	Real
IDIM (a1,a2)	Return a1-a2 if >0; otherwise 0	Integer	Integer
DIM (a1,a2)	Return a1-a2 if >0; otherwise 0	Real	Real
MAX0 (a1,...,an)	Select largest value from list	Integer	Integer
AMAX1 (a1,...,an)	Select largest value from list	Real	Real
AMAX0 (a1,...,an)	Select largest value from list	Integer	Real
MAX1 (a1,...,an)	Select largest value from list	Real	Integer
MIN0 (a1,...,an)	Select smallest value from list	Integer	Integer

INTRINSIC FUNCTIONS (Cont.)

FORM	FUNCTION	TYPE OF	
		ARGUMENTS	FUNCTION
AMIN1 (a1,...,an)	Select smallest value from list	Real	Real
AMIN0 (a1,...,an)	Select smallest value from list	Integer	Real
MIN1 (a1,...,an)	Select smallest value from list	Real	Integer
SQRT (a)	Return \sqrt{a} for a>0	Real	Real
EXP (a)	Return e^a	Real	Real
ALOG (a)	Return log (a) for a>0	Real	Real
ALOG10 (a)	Return log 10 (a) for a>0	Real	Real
SIN (a)	Return sine of a	Real	Real
COS (a)	Return cosine of a	Real	Real
TAN (a)	Return tangent of a	Real	Real
ASIN (a)	Return arcsine of a	Real	Real
ACOS (a)	Return arccosine of a	Real	Real
ATAN (a)	Return arctangent of a	Real	Real
ATAN2 (a1,a2)	Return arctangent of a1/a2	Real	Real
SINH (a)	Return hyperbolic sine of a	Real	Real
COSH (a)	Return hyperbolic cosine of a	Real	Real
TANH (a)	Return hyperbolic tangent of a	Real	Real
LGE (a1,a2)	Return TRUE if a1 > a2, else return FALSE	Character	Logical
LGT (a1,a2)	Return TRUE if a1 > a2, else return FALSE	Character	Logical
LLE (a1,a2)	Return TRUE if a1 <= a2, else return FALSE	Character	Logical
LLT (a1,a2)	Return TRUE if a1 < a2, else return FALSE	Character	Logical
